*Oil Spill Response Edition—Summer 2007*

## Slickbar's Equipment Shines in China's Largest Ever Oil Spill Event

On June 5, 2007, Chinese government emergency services carried out their largest ever exercise for training for an oil spill in Bohai Bay. More than 500 people, two helicopters and thirty vessels participated in the day's event testing their ability to respond to a marine disaster. It was televised live all over China. The Chinese government invested over \$1 million in this incredible event.

The well organized & executed drill simulated a real explosion on a 10,000-ton oil tanker resulting in a spill of 500 tons of oil off the coast of Qinghuangdao City in Hebei province. Steve Reilly was there for this historic event. "Ninety percent of the equipment utilized in the exercise was from Slickbar and all performed very well."

Two (2) [JBF DIP 402 VOSS Oil Skimming Systems](#) were prominently featured as the most important Rapid Response Advancing Skimmers, alongside the primary China MSA Response Vessels.

JBF DIP 402 VOSS Skimmers (above) are now ready for operations in China. The DIP 402 skimmer coupled with the DOP 250 screw pump provides recovery rates to 100 cubic meters/hour. The DIP belt and the pump are powered with our heavy duty DHPP 75 diesel/hydraulic power pack.

China MSA personnel (above) are deploying JBF DIP 402 VOSS Skimmer over the side after the explosion on oil tanker (in distance). The JBF system was over the side and skimming at the spill site within 15 minutes.

JBF DIP 402 VOSS Skimmer recovering the foam (used as an oil spill simulator) during this innovative exercise. Also, Slickbar's MKE style oil boom was deployed (in the background) from responding barge.

Dan Beyer (center, back row) with some China MSA personnel during classroom training of the JBF DIP 402 VOSS oil skimming system in Tianjin, China prior to the historic oil spill exercise on 05 June 2007.

## Slickbar expands product range with various colored Floats

### "Stealth Boom"

Evolving with the demands of our customers' requests, we are pleased to introduce our latest product, the "Stealth Boom." Basically designed to be the least visible in our line of containment and debris deflection booms. A Black External Foam Filled Float fastened to Black Heavy-duty PVC Belting material goes "virtually un-noticed" to the public eye.

"The ability to offer various color floats and fabrics allows us to build closer relationships with our clients and their specific needs regarding company, state or country colors," states Dan Beyer, Sales Manager (contact Dan at [dan@slickbar.com](mailto:dan@slickbar.com) to discuss these new options and any other ideas or improvements that may apply to your individual operations).

For additional information on our vast list of Oil Spill Containment and Recovery equipment, Floating or InTank Waste or Potable Water Fabric Baffle Systems, Multi Purpose Vessels, Corrosion Control products or our latest Fish Diversion Barriers, please feel free to contact us at any time or visit our continuously updated and useful website—[www.slickbar.com](http://www.slickbar.com).

**We welcome the opportunity to assist you!**

*[Slickbar Products Corporation and its Divisions](http://www.slickbar.com) sincerely "Thank you", our customers & friends for your continued support and faith in us to provide some of the most efficient and truly useful response equipment in the industry.*
